(a) Stage 3 Information Barrier & Writer
Withheld Across Information Barrier
• Internal Solution Notes: Key idea, ½ bh, routes, areas (90, 84)
• Five-Dimension Evaluation Rubric: Withheld so writer does not append representation menus or 4-part worksheets (Chapter 3)
Passed to Stage 3 Task Writer
• Student-Facing Setup: Play-area comparison & volunteer claim
• Verified Given Values: Outer 12, 8; Corner cuts 4, 3, 5 and 4, 3
• Open-Prompt Rule: State boundary facts; ask 1 open question
Stage 3: Write Student Task (≤ 2 rev.)
Checks: All given values present; no formula or splitting hint
(b) Generated Student PF Task for 6.G.A.1: "Two Play-Area Floor Designs" (158 Words)
Problem Setup & Given Dimensions:
"Both designs fit inside an outer rectangle that is 12 units long and 8 units wide. In Design A, a corner is removed... bounded by perpendicular sides of lengths 4 units and 3 units and a slanted side of length 5 units. In Design B, a rectangular corner of 4 units by 3 units is removed."
Shortcut Conjecture & Single Open Question:
"A volunteer conjectures that the designs have the same usable area because their outer rectangles match.
Question: Which design should the parks team choose for more usable floor space, and what is each usable area? Show your reasoning."
Support, Not Giveaway
States boundary lengths (12, 8, 4, 3, 5) without naming ½ bh or splitting
Open Student Invention
Tests outer-box trap (96 = 96) in 1 open prompt instead of a worksheet
Contrast with Chapter 3 One-Shot Garden Tasks: 0 pre-split shapes, 0 formula hints, 1 open question
