(a) Generated Basketball Prompt
Opening Paragraph: "You have recently practiced computing unit rates... not yet teaching you a formal rule for proportional relationships."
Question Part 1: "For each drill (A, B, and C), decide whether the number of made 3s is proportional to the time."
Question Part 2: "Possible representations include: unit-rate calculations, tables of equivalent pairs, repeated addition, number-line reasoning, or a graph."
(b) Why It Removes Student Invention
1. Announces Prior Skill and Target
Tells students to apply unit rates to proportionality
2. Turns Target into a Guided Step
Asks a direct yes-or-no check instead of an open comparison
3. Prescribes Five Representations
Removes student invention, yet rubric rewards the list
